The tech is being implemented into the game in phases, starting with the “FIFA 20” core, and will be fully integrated into all of the game’s gameplay systems before the year is over. The new technology is already being used at EA Sports labs to optimize match flow and provide meaningful coaching feedback to coaches, who spend a lot of time in FIFA analyzing and critiquing tactics and systems. “When you look at what we’ve done with the addition of manual direction and manual shooting and what we’re going to bring with our new AI system, you can see our improvements are impressive,” said Peter Bosz, lead play-designer for FIFA. “But our goal was to make the game more in tune with real-world soccer. That means being able to adapt and change strategy. So whether we’re creating a space for our AI to make tactics, or for our players to counter-attack if they’re in a one-on-one situation, or our players to run back from a long throw, this tech will allow us to do that.”

More than 6,000 miles of motion capture data was collected at eight cameras inside and around the Octagon facility. This data was fed into OptiTrack’s latest generation high-definition real-time tracking system to capture real-world actions. “What FIFA players do is similar to what the players on any real field do,” explained Bosz. “The one thing that makes FIFA such a great sport is the intense, flowing action. And since that in-game action is from real players, it’s critical that we use player data to accurately replicate what they do. “We captured 2,000 player-to-player motions and 5,000 player-to-ball actions,” Bosz continued. “We were able to capture the way these players move, and the way they make their decisions, and make their moves. So when our players reach into space and make a great move, you’re seeing it with that level of fidelity in real-time.” This tech will allow the game to also provide greater depth of understanding and nuance when it comes to play-and decision-making. “For example, if you’re making a pass or a tackle, the goal is to provide a great feeling of context

Give your game a custom experience by dropping down from the rankings table into a promotion tournament, or climb back from the lower division to challenge the elite. GAME MODES - Level Playing Fields In FIFA 22, gameplay is completely reimagined on the pitch, in stadiums, and in training grounds. Players will truly feel the dimensions of each pitch when they gain access to a whole new set of play mechanics. The most important player decisions and challenges will take place on the new level playing fields, and change the rules of the game based on the playing surface. PHYSICS: The Pitch The years of development of a new generation of artificial intelligence has paid off in FIFA 22, with the pitch physics redesigned from the ground up. Now, as you approach the ball, the world around you will behave in a realistic way, replicating the physics and the physical characteristics of any pitch. The pitch physics work in a variety of ways: During the game, Å“tvös LÅ¼tya, one of the biggest football stadiums in Europe, will come to life with its crowd and fans. Balls bounce in an entirely different way than in FIFA 21. The movement of players on the pitch will be different, depending on the angle of approach, body position and approach, and you will feel more like you are actually on the pitch. How the Footballs behave: Sprints: Players will make different types of sprints, such as long, mid-range and short sprints, depending on the type of ball they are playing. Dribbling: Dribbling with the ball will work in a different way, but not

FIFA is known the world over as the best football video game series of all time. Featuring FIFA 07, FIFA 08, FIFA 09, FIFA 10 and FIFA 11, fans of the series know it for its match day experience - whether you're on your sofa or with friends on the pitch. FIFA 12 As the name suggests, FIFA 12 is the newest game in the FIFA franchise. The game is set in the most recent season of the new global season, which includes new additions to the game. It features some cool dynamic in-game camera views and new ways to play. FIFA 12 is widely considered to be one of the top football games of all time and was released on September 24th, 2011. Features · Unparalleled Authenticity There are many elements that go into making FIFA one of the most authentic football gaming experiences out there. With the inclusion of "unrestricted licenses", players have the opportunity to change and edit the game in ways they could never with other football titles. Players will also have the opportunity to edit AI, with the standard AI control from the past few games set aside. Furthermore, the gameplay engine in FIFA is optimized for CPU and GPU, allowing for multiplayer experience to be significantly enhanced. This new engine means that both the visuals and gameplay are set to be at the very best of the current generation, and also the next generation. This is achieved by doing a full engine recomposition and porting and features a radical new physics engine, which means that every single collision in the game is tracked and recorded on the server with every new collision and movement of players, and is then rendered on the server side to create realistic ball movements and physics. The inclusion of Online Pass is also a big step to keep the game relevant long after the game is out of the box. A major feature of this game is the inclusion of real-world data such as off-ball movement, real world player speeds, and real world health ratings. Other aspects include AI, new player models, new digital player faces, All-New Player Ratings, New Pass Types and New Game Modes such as The Duran. FIFA 13 · New Player Movement New player movement models have been used in FIFA for a long time now, but with modern physics and animations, players are able to move in a much more realistic manner than before. Additionally, the inclusion of All-New Player Ratings allows players to see a
