Indigo Studio Keygen WORK

# Download

A handy utility specially created to help those who need to design interfaces for web and desktop applications, as well as for other projects. The other day I needed to make one important design document for one web application. I tried to do it in Photoshop but ran into some problem. After a few minutes, I realized what the problem was and decided to make the design right in the HTML. I ended up spending about 30 minutes on this task. Compared to that, it would take me about 1 hour to do everything in Photoshop. In this article I will tell you how I made the design of the page and what is my problem.
