Overall, I love this product! I love the ability to boot from this disc in Windows and then run Acronis True Image to back up my system. I also like that the backup size can be increased incrementally, and also that it can be expanded incrementally. with windows 10 1909 update they broke the world of win32 disk images. the only option left for many is ghost or Clonezilla that I dont want to use. I created a no boot disk for Clonezilla and a no boot disk for Ghost just to test the disk image save feature but it will not boot any of them. i tried several like new drive ssd's and none of them will boot. this was due to that and another update that was put in the registry to make disks that are not bootable fail now. Dell doesn't test these drives before releasing them and its lucky that is not more common. I had to filter out all the crashes and the kill switch of control panel. Its a biggie because i have lots of drives. I prefer Windows DD and Paragon2011. I use all these for imaging backups of Windows 7 along with old machines. It is the only tools that support volume compression or alternatively I can start with a clean install and restore the OS as is the cost. I like how it can backup as a partition or disk image with a clean install. I also like the CloneDisk Windows version but it has a lot of issues that I would not recommend using it. If your looking for Windows backup software that is simple to use then this is it. I had image a 1 tb drive in 2hrs and it worked well. i have tried different versions and are really good tools for imaging and cloning. the only thing that kind of pisses me off is that all the newer drives that come out,when you boot the CD its not as fast as dd which will allow me to image and clone any drive that is within specs with out waiting for an hour of burning. I just recently started using Clonezilla and it sucks. Its not as good as Ghost. This is because I can't write to a WinPE live boot disk. The boot option file can't be rewritten like

in Ghost

XCopy did a good job copying files and folders. It did not however copy some files that were in the image that I wanted to be copied. And it did not copy files without error messages. It had to be told to copy the files, otherwise I would just get a deadlock or something like that. In one place it had to be copied 3 times before it worked. The only good thing I can say about it is that it can create very fast boot disks. I have recently discovered that AOMEI Backupper 2 can clone from a bootable thumb drive and I am very please with the feature. My restore from system image backed up with AOMEI Backupper was just over half the restore time of the full version. Its not as easy to use as XCopy, but I find it faster and more stable. I am sure that if it could do that with my bootable drives, it would be my goto program for more than just disk image backups. There are 2 types of cloning software on the market 1) full version (which requires an internet connection to do backups) and 2) that offer only image backups. The author has provided a report of how long the different applications took to perform a full backup on his test system. The results for the free version of AOMEI Backupper were no surprise to me at all. And the only difference between the freeware and the full version was support for backup of bootable drives (otherwise it was free). It has to be said that for the copy my job, and the fact that I am a recovering disk if lost I will try out the free version since I did not have the time to investigate why the trial version didn't work at all. I am running the trial version now and some backup operation are really fast. Some of the operations are not working at all. I tried again the xcopy and could not restore from full/bootable backup (the trial version is not restoring the bootable backups). 5ec8ef588b
