Layered Presentation Layers: Layer, the fundamental building block of a Photoshop document, is a powerful tool for organizing your layers. You can create as many Layers as needed to create all of the different elements that make up your final image. In the Layers panel, you'll find Reversible Layers, which allows you to easily switch back and forth between a Current and an Old or a New state. Another great way to organize your Layers is to create Design Zones. Design Zones are where you'll place your layers and work on them. When you're done, all you have to do is click on the Design Zones to hide the rest of the layers and remove any design elements that are unrelated to the final image. This will help you keep your files tidy and organized. Lightroom has changed my photography life - and it's why it's my favorite editor.
